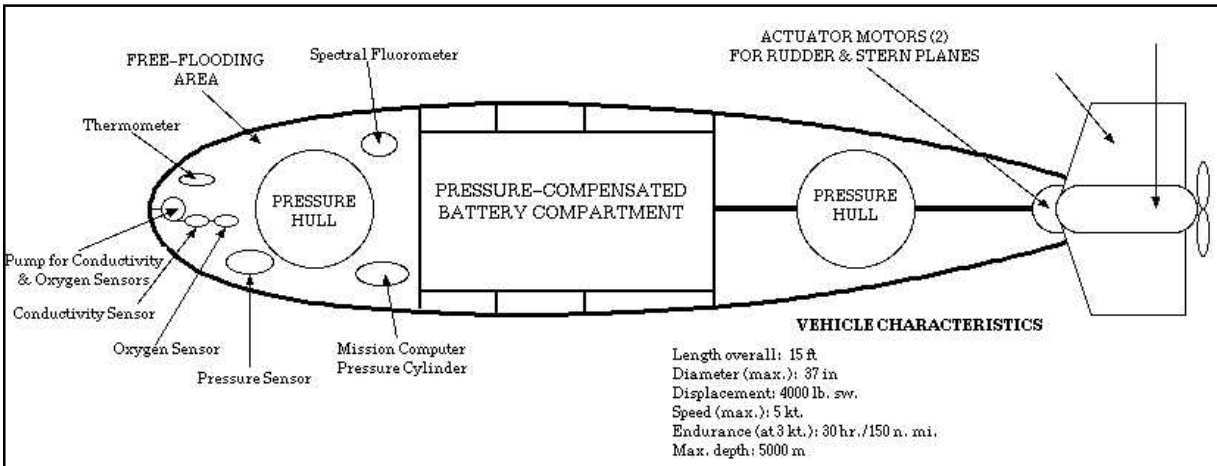
INSTRUÇÕES

1. ESTA PROVA CONTÉM 3 (TRÊS) TEXTOS SEGUIDOS DE QUESTÕES DE COMPREENSÃO.
2. ESCOLHA E ASSINALE A ALTERNATIVA CORRETA SEMPRE DE ACORDO COM O RESPECTIVO TEXTO.

TEXTO 1 - QUESTÕES 41 – 44



Recent technological advances in manned and unmanned undersea vehicles along with breakthroughs in satellite technology and computer equipment have overcome some of the limitations of divers and diving equipment. Without a vehicle, divers often became sluggish and their mental concentration was limited. Because of undersea pressure that affected their speech organs, communication among divers was difficult or impossible. But today, most oceanographers make direct observations by means of instruments that are lowered into the ocean, from samples taken from water, or from photographs made by orbiting satellites. Direct observations of the ocean floor are made not only by divers but also by deep-diving submarines and aerial photography. Some of the submarines can dive to depths of more than seven miles and cruise of depths of fifteen thousand feet. In addition, radio-equipped buoys can be operated by remote control in order to transmit information back to land-based laboratories, often via satellite. Particularly important are data about water temperature, currents and weather. Satellite photographs can show the distribution of sea ice, oil slicks, and cloud formations over the ocean. Maps created from satellite pictures can represent the temperature and the color of the ocean's surface, enabling researchers to study the ocean currents. Furthermore, computers help oceanographers to collect and analyze data from submarines and satellites. By creating a model of the ocean's movement and characteristics, scientists can predict the patterns and possible effects of the ocean on the environment.

Recently, many oceanographers have been relying more on satellites and computers than on research ships or even submarine vehicles because they can supply a greater range of information more quickly and more efficiently. Some of mankind's most serious problems, especially those concerning energy and food, may be solved with the help of observations made possible by this new technology.

QUESTÃO 41

O texto acima trata principalmente de

I- "Technological advances in oceanography."
II- "Communication among divers."
III- "Direct observation of the ocean floor."
IV- "Technological advances in undersea vehicles."
V- "Manned and unmanned undersea vehicles."

Assinale a alternativa correta.

A) Somente I, IV e V estão corretas.
B) Somente I está correta.
C) Somente II está correta.
D) Somente I e II estão corretas.

QUESTÃO 42

A palavra ***sluggish*** no contexto "Without a vehicle, divers often became sluggish and their mental concentration was limited" está sendo usada de modo semelhante a

I- very nervous.
II- lethargic.
III- slow in their movements.
IV- slow-moving.
V- very confused.

Assinale a alternativa correta.

A) Somente III e IV estão corretas.
B) Somente I e V estão corretas.
C) Somente II, III e IV estão corretas.
D) Somente III está correta.

QUESTÃO 43

No passado, a comunicação entre mergulhadores embaixo d'água era complicada devido

I- a problemas que ocorriam nos órgãos da fala.
II- a defeito nos veículos submarinos utilizados.
III- à dificuldade de articulação dos sons com clareza.
IV- à grande pressão a que eram submetidos.
V- à perda de concentração e à lentidão dos movimentos.

Assinale a alternativa correta.

A) Somente I e IV estão corretas.
B) Somente I e V estão corretas.
C) Somente II está correta.
D) Somente V está correta.

QUESTÃO 44

Podemos afirmar que, atualmente, para a exploração direta do fundo do mar, os cientistas recorrem

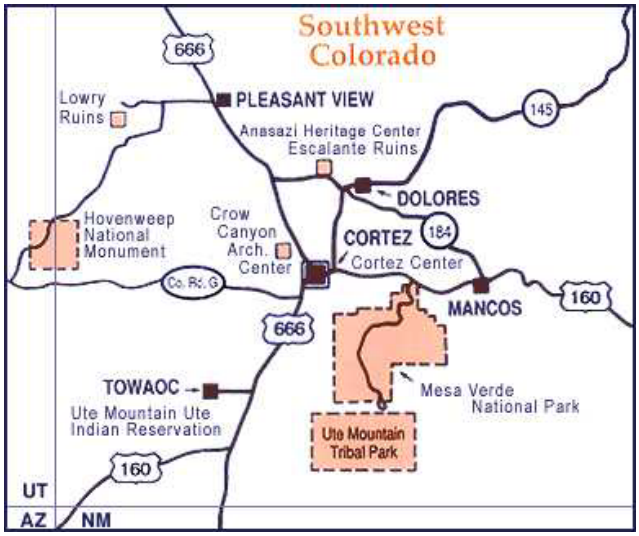
I- a veículos submarinos e a mergulhadores.
II- ao uso integrado de novas tecnologias.
III- a mergulhadores altamente especializados.
IV- à análise de fotografias tiradas por satélites.
V- a bóias equipadas com radares e transmissores.

Assinale a alternativa correta.

A) Somente II e IV estão corretas.
B) Somente I e III estão corretas.
C) Somente I e V estão corretas.
D) Somente I, II e IV estão corretas.

TEXTO 2 - QUESTÕES 45 – 47

Mesa Verde is the center of prehistoric Anasazi culture. It is located in the high plateau lands near Four Corners, where Colorado, Utah, New Mexico, and Arizona come together.



This high ground is magestic but not forbidding. The climate is favorable for crops and livestock. Even today, the isolation imparts feelings of magesty and serenity. Tiny streams trickle at the bottom of deeply cut canyons, where seeps and springs provided water for the Anasazi. Rich red soil provided fertile ground for their crops of corn, beans, and other vegetables.

For a thousand years the Anasazi inhabited this area. Although the Anasazi are not related to the Navajos, no one knows what these indians called themselves, and so they are commonly referred to by their Navajo name, Anasazi, which means "ancient ones" in the Navajo language.

Around 550 A.D., early Anasazi – then momadic people archaeologists call the Basketmakers – began constructing permanent homes on the mesa tops. In the next 300 years, the Anasazi made rapid technological advancements, including the refinement of pottery-making skills. This phase of development is referred to as the Early Pueblo Culture.

By the Great Pueblo period, 1100-1300 A.D., the Anasazi population had swelled to over 5.000, and the architecturally ambitions cliff dwellings came into being. The Anasazi moved from the mesa tops onto ledges on the steep canyon walls, creating dwellings that were hard to reach and very difficult to construct. The largest settlement contained 217 rooms. One might surmise that these dwellings were built for protection, but the Anasazi had no known enemies and there is no sign of conflict.

But the bigger mystery is why the Anasazi occupied these structures for such a short time. By 1300 Mesa Verde was deserted. It is conjectured that the Anasazi abandoned their settlements because of drought, overpopulation, crop failure, or some combination of these.

QUESTÃO 45

De acordo com o autor, o nome que os Anasazi utilizavam para se autodenominar

A) ainda é desconhecido por arqueólogos.
B) significava "aqueles que confeccionam cestas".
C) significava "os antigos" em sua língua materna.
D) originou-se das tribos e da língua dos Navajos.

QUESTÃO 46

Podemos inferir que a Cultura do "Early Pueblo" mencionada no texto durou aproximadamente

A) mil anos.
B) duzentos anos.
C) quinhentos e cinqüenta anos.
D) trezentos anos.

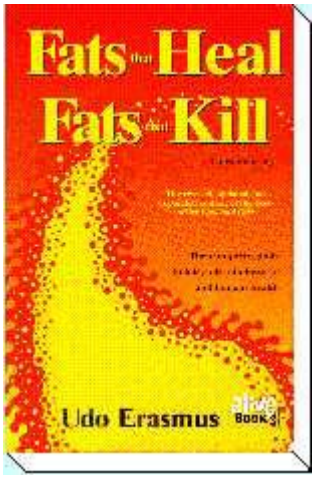
QUESTÃO 47

Os Anasazi abandonaram Mesa Verde possivelmente por fatores tais como os indicados abaixo, **EXCETO**

A) seca.
B) superpopulação.
C) guerras.
D) ausência de colheita.

TEXTO 3 - QUESTÕES 48 - 50

While fats have lately acquired a bad image, one should not forget how essential they are. Fats provide the body's best means of storing energy and are far more efficient energy sources than either carbohydrates or proteins. They act as insulation against cold, as cushioning for the internal organs, and as lubricants. Without fats, there would be no way to utilize fat-soluble vitamins. Furthermore, some fats contain fatty acids that contain necessary growth factors and help with the digestion of other good foods.



An important consideration of fat intake is the ratio of saturated fats to insaturated fats. Saturated fats, which are derived from dairy products, animal fats, and tropical oils, increase the amount of cholesterol in the blood. Cholesterol may lead to coronary heart disease by building up in the arteries of the heart. However, unsaturated fats, which are derived from vegetable oils, tend to lower serum cholesterol if taken in a proportion twice that of saturated fats.

The consumption of a variety of fats is necessary, but the intake of too much fat may lead to a variety of health problems. Excessive intake of fats, like animal excesses, is to be avoided.

QUESTÃO 48

Podemos dizer que o texto acima preocupa-se, principalmente, em descrever

A) os perigos do colesterol para nossa saúde.
B) o papel que as gorduras exercem na saúde humana.
C) a importância de uma boa alimentação.
D) os benefícios das gorduras em nossa alimentação.

QUESTÃO 49

Com relação às gorduras, o leitor pode inferir que

A) são eficientes fontes de reserva de energia.
B) são extremamente prejudiciais à saúde.
C) dificultam a digestão de outros alimentos.
D) a população já acredita em seus benefícios.

QUESTÃO 50

Baseado neste texto, que conselho mais razoável você daria a um amigo que não consegue parar de consumir gordura animal?

A) "Não se preocupe! A ciência já descobriu que a gordura de origem animal, como a presente na manteiga, não é prejudicial."
B) "Pare de comer gordura animal ou não será possível controlar seu nível de colesterol, o que provocará problemas cardíacos."
C) "Você deverá eliminar totalmente as gorduras presentes em sua alimentação, para evitar excesso de peso e colesterol."
D) "Para o equivalente a cada colher de gordura saturada ingerida, consuma duas colheres de gordura oriunda de óleos vegetais."
